I'm a passionate Backend/Mobile Software Developer with proven ability to transform ideas into high-quality software solutions. Adept at collaborating in cross-functional teams to deliver impactful projects while continually enhancing technical proficiency.

Projects

MULTI-VENDOR PRODUCTS DELIVERY APP (MOBILE/REST API)
Built with FastAPI, SQLAlchemy ORM, PostgreSQL, Alembic and React Native. Users(customers) list products(orders) on the app and have vendors (dispatch companies) pick it up for delivery. A wallet is created for each registered vendor. Upon delivery confirmation by the customer, the wallet is created.

JOB LISTING WEB APP
Full stack job listing web app for posting vacancies. Built with Django and PostgreSQL. It has Employers and Employees as types of users. Employee users can add work experience, educational and other details. Employer users can add profiles and list vacancies.

RESTAURANT RESERVATIONS REST API
This REST API allows users to register and make reservations in a restaurant. The restaurant owner can set the restaurant capacity. When the restaurant is occupied, users get a prompt telling them the restaurant is fully booked. Roles are assigned to restaurant staff to confirm and cancel reservations. Built with FastAPI, Tortoise ORM, Aerich and PostgreSQL database.

PIZZA ORDERING REST API
This API allows users to register and order Pizza. Pizzas are grouped in SMALL, MEDIUM, and LARGE sizes. The restaurant owner can also set other sizes. Users can cancel orders within a period that is set by the Pizza restaurant.

Technologies

• Python • Django • Fast API • PostgreSQL • DRF • JavaScript • React Native • Docker • HTML • CSS
